Bootstrap

Build responsive, mobile-first projects on the web
with the world's **most popular front-end component library**.
Bootstrap is an open source toolkit for developing with HTML, CSS, and JS.

Bootstrap vs **Material**

Quick start

Quick start

CDN 활용을 통해 Bootstrap에 작성된 CSS, JS를 활용하자!

Quick start

Looking to quickly add Bootstrap to your project? Use BootstrapCDN, provided for free by the folks at StackPath. Using a package manager or need to download the source files? [Head to the downloads page](#).

CSS

Copy-paste the stylesheet `<link>` into your `<head>` before all other stylesheets to load our CSS.

```
<link href="https://stackpath.bootstrapcdn.com/bootstrap/4.2.1/css/bootstrap.min.css" integrity="sha384-GJzZqFGwb1QTTN6wy5" data-bbox="216 475 783 495"/>
```

JS

Many of our components require the use of JavaScript to function. Specifically, they require [jQuery](#), [Popper.js](#), and our own JavaScript plugins. Place the following `<script>`s near the end of your pages, right before the closing `</body>` tag, to enable them. jQuery must come first, then Popper.js, and then our JavaScript plugins.

We use [jQuery's slim build](#), but the full version is also supported.

```
<script src="https://code.jquery.com/jquery-3.3.1.slim.min.js" integrity="sha384-q8i/X+965Dz00rT7abK41JStQIAqVgRVzpbzo5smXKp4YfRvH+8abtTE1F" data-bbox="215 657 783 675"/>  
<script src="https://cdnjs.cloudflare.com/ajax/libs/popper.js/1.14.6/umd/popper.min.js" integrity="sha384-wHAiFfRlMFy6i5SRaxvf0CifBUQy1xHdJ" data-bbox="215 675 783 693"/>  
<script src="https://stackpath.bootstrapcdn.com/bootstrap/4.2.1/js/bootstrap.min.js" integrity="sha384-B0UglyR+jN6CkvvICOB2joaf5I4l3gm9GU6" data-bbox="215 693 783 701"/>
```

Curious which components explicitly require jQuery, our JS, and Popper.js? Click the [show components](#) link below. If you're at all unsure about the general page structure, keep reading for an [example page template](#).

Our `bootstrap.bundle.js` and `bootstrap.bundle.min.js` include [Popper](#), but not [jQuery](#). For more information about what's included in Bootstrap, please see our [contents](#) section.

CDN ?

Content Delivery(Distribution) Network

컨텐츠(CSS, JS, Image, Text 등)을 효율적으로 전달하기 위해
여러 노드에 가진 네트워크에 데이터를 제공하는 시스템.

개별 end-user의 가까운 서버를 통해 빠르게 전달 가능(지리적 이점)

외부 서버를 활용함으로써 본인 서버의 부하가 적어짐.

CDN은 보통 적절한 수준의 캐시 설정으로 빠르게 로딩할 수 있음.
